

# SimHumalator

A Human Radar Simulator

1. Download the x-executable file for PWR\_Simulator or FMCW\_Simulator
2. Open a terminal and check the current directory by typing **pwd**
3. Change to a directory where the x-executable file is downloaded. Type **cd** followed by a space and the pathname (e.g., **cd /usr/local/lib**) and then press [Enter]. For more information regarding changing the paths, please follow the following link- <https://www.techrepublic.com/article/linux-directory-navigation-tips-and-tricks/#:~:text=To%20change%20to%20a%20directory,name%20of%20the%20current%20directory.>
4. Want to install FMCW Simulator?
  1. Type **./FMCW\_Simulator\_Ubuntu.install** and press [Enter]
  2. Please change the default address to a different location; otherwise, it will display error in creating a folder. Save in other drive or desktop with a proper name (MyFMCW\_App). Similarly, it will ask for installing the MATLAB runtime installation; please change the default folder.
  3. Are you trying to install using **sudo ./FMCW\_Simulator\_Ubuntu.install**? The app would install but might not save data generated using the app.
  4. If you have a way around different from the above two options, please drop an email.
5. Follow Steps 1 to 4 for installing the PWR simulator.
